ABOUT

Second-year Computer Science student with hands-on experience building AI-driven backend systems at a startup and shipping a published Android app with 200+ active users. Combines academic coursework with real-world software development experience across backend, ML, and full-stack projects.

TECHNICAL SKILLS

- **Programming** : Python, C++, C, C#, MicroPython, Rust, R, React, JavaScript, TypeScript, HTML, CSS.
- **ML Libraries**: Tensorflow, NumPy, Pandas, Matplotlib.
- **Other Technologies** : FastAPI, Git, CI/CD, Linux, Bash, Firebase, Excalidraw, Unity, MariaDB.
- **Soft skills**: Teamwork, Communication, Problem-Solving, Adaptability, Time Management, Collaboration, Critical Thinking

EDUCATION

B.Sc. Computer Science (Co-op) | Dean's List (All Semesters) | CGPA: 4.06/4.33 Jan 2026 - Jun 2029

Toronto Metropolitan University, Toronto, Canada

Relevant Coursework: Data Structures, Software Engineering, Operating Systems, UNIX/C/C++, Algorithms & Programming.

B.Eng. in Information Technology | 1 Year Completed | CGPA: 5.0/5.0 Aug 2024 - Jul 2025

Metropolia University of Applied Science, Espoo, Finland

Relevant Coursework: Embedded Systems Programming, C Programming in IoT Devices, Linux, Engineering Mathematics.

WORK EXPERIENCE

Junior AI Developer Jun 2025 - Feb 2026

Cydora, Helsinki, Finland

Technologies used: Python, SQL, REST APIs, CI/CD, Git, PyTorch, scikit-learn, pandas, NumPy, LangChain.

- Facing manual workflows for 4 clients, built AI backend systems in Python using PyTorch and scikit-learn via REST APIs.
- Tasked with scaling backend, built ML pipelines with pandas and NumPy via LangChain, handling 2,000+ requests.
- Facing reliability gaps, added CI/CD and testing using Git, cutting manual processing time by an estimated ~25%.

AI Intern

Mar 2025 - Jun 2025

Cydora, Helsinki, Finland

Technologies used: Python, React.js, Web Development tools, AI Agents, LangChain, scikit-learn

- Asked to support 2 client apps, integrated AI features using Python and React.js across the stack.
- Seeing a slow workflow, built 3 AI agents using LangChain and scikit-learn, cutting time by ~15%.
- Assigned pre-delivery QA, tested and debugged the stack in Python, cutting reported bugs by ~20%.

PROJECTS

Loot Radar | Play Store App | Kotlin Multiplatform | Firebase | <https://github.com/KartikPat250905/loot-radar>

- Built and published Loot Radar (Kotlin Multiplatform), a giveaway tracker with 200+ users and exactly-once alerts.
- Implemented Firebase Auth and Firestore for secure user accounts and real-time cross-device sync of filter preferences
- Designed a filter engine matching giveaways against thousands of per-user platform/type combinations.

Drakula V2 | Python, JavaScript, HTML, CSS, MariaDB | Group Project | <https://github.com/ktnlvr/drakula-v2>

- Developed a 3D horror game using JavaScript, HTML, CSS, and Python.
- Leveraged Three.js to create realistic 3D models and immersive environments.
- Integrated the game with an SQL Server backend using python Fast API to dynamically fetch real-world airport data.

Minishell | School 42 | C, Bash, Unix Systems Programming | Duo Project | <https://github.com/KartikPat250905/minishell/>

- Implemented a Unix-style shell in C, building a custom lexer/parser to tokenize and interpret commands and pipes.
- Built a process execution model handling forking, piping, and command dispatch, with signal handling to preserve state.
- Designed a linked-list memory tracker that registered allocations at creation, enabling one pass to free memory.

HACKATHON

Supercell AI Hackathon (Helsinki, Finland) | Unity, C# | 3rd place | AI/Game Development hackathon

- Won 3rd place among 50+ teams, building a real-time AI game character blending LLM behavior with gameplay narrative.

Student Network Challenge Hackathon (University of Helsinki, Finland) | 3rd place | Idea hackathon

- Secured 3rd place at this Microsoft/Nokia/Elisa-backed hackathon by conceptualizing an AI-driven sustainability solution.

Junction Hackathon (Helsinki, Finland) | Python (ML) | Top 5 Finalist | <https://github.com/ktnlvr/junction-2024>

- Built an ML model predicting input amounts from water-loss data, achieving 97% accuracy and a Top 5 finish.
